

·ORGANIC FERTILIZER· TOROCHICK

Proizvod nastao višefaznom preradom stajnjaka sa naših živinarijskih farmi, gde smo primenom svetskih prestižnih tehnologija uspeali da sačuvamo hranljivu vrednost za Vaše njive i buduće zasade.

The product was created by multi-processing of manure from ours poultry farms, where we have managed to preserve the nutritional value for your fields and future plantations by applying the world's prestigious technologies.

Torochick je pasterizovan, otprašen, vrlo stabilan, niske vlažnosti, lako primenljiv, koji se odlikuje sledećim hemijskim sastavom:

Torochick is pasteurized, dusty, very stable, low humidity, easy to apply, which is characterized by the following chemical composition:

SRB HEMIJSKI SASTAV			CHEMICAL COMPOSITION ENG		
	Rezultat (srednja vrednost iz tri ponavljanja)	Standardna devijacija		Results (middle value from three repetitions)	Standard deviation
Hranljivi elementi			Nutrients		
Ukupni (N)	2,9-3,9%	0,16%	Total (N)	2,9-3,9%	0,16%
Mineralni (N) (NH4+NO3-N)	0,51% + 0,02%	0,04+0,008%	Mineral (N) (NH4 + NO3-N)	0,51% + 0,02%	0,04+0,008%

Boja	tamno braon		Color	dark brown	
Miris	blago karakterističan		Smell	slightly characteristic	

KOLIČINA PRIMENE: 1000-2500 kg po hektaru. Biljne vrste i tip zemljišta za koje je namenjeno: Može se koristiti na svim tipovima zemljišta za gajenje različitih biljnih vrsta kako na otvorenom prostoru tako i u zaštićenom prostoru (plastenici, staklenici itd). Posebno je pogodno za povećavanje travnatih površina. Moguća nepovoljna delovanja: U predložnim količinama i predložnim načinima primene ne mogu se ispoljiti nepovoljna dejstva na gajene biljke. **VREME PRIMENE:** 15 dana pre nego ojača korenov sistem, a kod višegodišnjih biljaka u proleće i jesen. **PREPORUKE I NAPOMENE:** količine primene zavise od tipa zemljišta i sadržaja organske materije u njemu, pa zbog toga preporučujemo prethodnu analizu zemljišta. Najbolje aplikovati na dubinu do 15 cm (plitko zaoravanje, freziranje). Kod ratarskih biljaka unošenjem u zonu redova sadnje tj. levo i desno na 20 do 40 cm od biljaka, ili u same redove sadnje pre rasanjanja. Tokom vegetacije može se razmutiti u vodi (1 kg u 10 l vode) i nakon dan dva ručno zaliti biljke koje na ovaj način brže usvajaju hranljive materije. Nema ograničenja u primeni. Čuvati na suvom i tamnom mestu. Rok upotrebe neograničen.

QUANTITY OF APPLICATION: 1000-2500 kg per hectare. Plant species and type of land for which it is intended: It can be used on all types of land for growing different plant species both outdoors and in a protected area (greenhouses, hothouses, etc.). It is especially suitable for increasing grass areas. Possible adverse effects: In the proposed quantities and proposed methods of application, no adverse effects on cultivated plants can be manifested. **APPLICATION TIME:** 15 days before it strengthens the root system, and with perennial plants in spring and autumn.

RECOMMENDATIONS AND NOTES: the amount of application depends on the type of soil and the content of organic matter in it, so we recommend a preliminary analysis of the soil. It is best to apply to a depth of 15 cm (shallow plowing, milling). In field crops by entering the planting rows in the zone, ie. left and right at 20 to 40 cm from the plants, or in the seed rows before planting. During the vegetation, it can be stirred in water (1 kg in 10 l of water) and after day two, water the plants by hand, which in this way absorb nutrients faster. There are no application restrictions. Store in a dry and dark place. Shelf life unlimited.

Upotrebom Torochick-a Vašoj zemlji vratite organsku materiju sve prirodne makro i mikro elemente koji su nastali dugogodišnjom eksploatacijom, upotrebom veštačkih đubriva, navodnjavanjem itd.

By using Torochick, you will return to your country organic matter, all natural macro and micro elements that were created by long-term exploitation, use of artificial fertilizers, irrigation, etc.

Na ovaj način odgovorno, dosledno prema našoj zemlji sprovedite našu zajedničku misiju: "PRIRODNO PRIRODI".

In this way, responsibly, consistently towards our country, you carry out our common mission: "NATURAL TO NATURE".

Vašoj zemlji vraćamo plodnost, a samim tim i Vaš uloženi trud, rad i novac će Vam se mnogostruko vratiti.

We are returning fertility to your country, and therefore your invested effort, work and money will be returned to you many times over.

Odgovorni prema planeti, odgovoreni prema potomstvu!
Vaš tim Mivka

Responsible to the planet, responsible to posterity!
Your Mivka team
